

ESSENCE PRINTING OFFERS AN
ECO-FRIENDLY SOLUTION FOR
THE ENTIRE RANGE OF PRODUCTS
AND SERVICES OFFERED

ECO FRIENDLY

As a member of the Forest Stewardship Council, Essence Printing is able to offer a wide range of paper stocks from managed sources. Giving our clients the opportunity to join us in conserving the resources of our planet. A complete selection of wind-power-generated and other earth-friendly papers are always available from your salesperson or customer service representative.

All of our inks and varnishes are made from soy oils - a renewable and environmentally friendly product. The coatings we use are completely water based, as is the plating process - which is fully neutralized with a simple baking soda solution.

Essence Printing maintains a state-of-the-art facility which was renovated to serve a particular function. The building is energy efficient beyond the standards of PG&E and the state of California requirements. All equipment used is ENERGY STAR qualified and self-contained for greater efficiency.

Essence also utilizes the latest virtualization software - reducing server usage by 50% and energy costs by 80%, allowing us to decrease operating costs while improving service levels. Essence Printing is at the forefront of the environmental movement within our industry. We are not using a few key words found on the internet... we are committed to the ideas and practices in the hope that others will join us in saving our planet.

We offer this opportunity to join us in helping to create a better world to all who are kind enough to allow us to service their needs. We are always available to answer your questions on green print products and practices, please give us a call.

More information about our Eco-Friendly procedures and practices is available in the Essence Printing **Nutritional Impact Report** and on-line at: www.EssencePrinting.com
